The *Journal of Clinical Microbiology*, a publication of the American Society for Microbiology, 1913 I St., N. W., Washington, D.C. 20006, is devoted to the dissemination of new knowledge concerning the applied microbiological aspects of human and animal infections and infestations, particularly regarding their etiologic agents, diagnosis, and epidemiology. Papers dealing with antibiotics and antimicrobial agents and chemotherapy, with fundamental aspects of infection and immunity, and with food or dairy microbiology fall within the scope of other ASM publications. The *Journal* is published monthly, and the twelve numbers are divided into two volumes per year. The nonmember subscription price is $50 per year. The member subscription price is $13 per year. Single copies are $5. SPORES VI

EDITORS:
Philipp Gerhardt, Harold L. Sadoff, and Ralph N. Costilow

This new book comprises papers selected from the **Sixth International Spore Conference,** held at Michigan State University, October 10-13, 1974.

Comparative sporology of diverse microbes, other than the Bacillaceae, is one main theme of this volume. A series of review articles brings together critical assessments of what is known and what is not known about prokaryotic and eukaryotic spores and similar resting bodies of the following groups: actinomycetes, myxobacteria, azotobacter, slime molds, blue-green algae, fungi, and yeasts.

Molecular aspects of developmental biology constitute the second major theme of this volume, represented in a group of papers on the widely studied spores of *Bacillus* and *Clostridium*. Molecular control and regulation of differentiation dominate study of the cellular processes of sporulation and germination in the next two sections. Papers on dormancy and resistance comprise a fourth section, while a fifth section includes updated genetic maps of *Bacillus subtilis* and papers on special methods used in spore research.
